Project1

With the prompt of project 1 our group decided to create a simple functional piece that would be used in a daily basis. We decided to create a simple key holder that can hold up to 3 sets of house keys. We accounted hold, stability, and placement when creating this piece. We angled the key holes it won't slide out of holder. Also we added a small lip in the hole to stabilize the key in place too.

My piece displays the most basic version of the piece with no added features and with exposed honeycombing. We hope if this would be uploaded to the public people would be added other features.
